## **BOOK SYNOPSIS**

Named by Amazon as one of the "Best Nonfiction Books of the Month" An award-winning science journalist pulls the alarm on the dysfunction plaguing scientific research--with lethal consequences for us all American taxpayers spend \$30 billion annually funding biomedical research. By some estimates, half of the results from these studies cant be replicated elsewhere-the science is simply wrong. Often, research institutes and academia emphasize publishing results over getting the right answers, incentivizing poor experimental design, improper methods, and sloppy statistics. Bad science doesnt just hold back medical progress, it can sign the equivalent of a death sentence. How are those with breast cancer helped when the cell on which 900 papers are based turns out not to be a breast cancer cell at all? How effective could a new treatment for ALS be when it failed to cure even the mice it was initially tested on? In Rigor Mortis, award-winning science journalist Richard F. Harris reveals these urgent issues with vivid anecdotes, personal stories, and interviews with the nations top biomedical researchers. We need to fix our dysfunctional biomedical system-now.
